PRACTICAL - 1

AIM : Install your choice of Linux distribution
eg. Ubuntu, Fedora, Debian.

STEP 1 :

Selecting a virtual optical disk, click on the 'start' option.

STEP 2 :

Proceeding, two options i.e → Try Ubuntu and Install Ubuntu will be given select or click 'Install Ubuntu'.

STEP 3 :

Further, it will show updates and other softwares page. Just click on 'continue' option.

STEP 4 :

Click onto 'Install Now' option.

STEP 5 :

Further, a map will be displayed on your PC screen. Avoiding it, just click onto the 'continue' option on the right hand side.

STEP 6 :

Very important page will be displayed on your which will ask you for your details and

password. After filling all the details, onto 'continue' option.

STEP 7 :

A page will be displayed on your PC screen asking for your password to install Ubuntu. Filling that, just click onto the 'sign in' option.

STEP 8 :

Installing and signing up successfully, will now see the screen of different act for different purposes.

B) Customize desktop environment, by changing different default options like changing default background, themes, screensavers.

ACCESSING APPEARANCE SETTINGS :

→ To access Appearance Settings in Ubuntu let's click on User menu at the top right corner, on the top Menu bar and select System Settings...

→ A window will pop-up with All divided into Personal, Hardware and Settings.

options icons. Let's first select the Appearance icon.

CHANGING UBUNTU THEME :

→ Ubuntu also has an option to change the Desktop theme, which is one click will change the entire way your computer looks.

→ To do that, click on the drop-down menu below the Wallpapers thumbnails, and choose between Ambiance, Radiance or High Contrast.

→ Ambiance is a light theme that looks a bit more Mac-like, while Radiance is the darker brown theme used in Ubuntu by default.

c) ~~Screen Resolution~~ : Ascertain the current screen resolution for your desktop.

CHANGE THE SIZE OR ROTATION OF THE SCREEN :

→ You can change how big (or how detailed) things appear on the screen by changing the screen resolution.

→ You can change which way up things appear (for example, if you have a rotating display) by changing the rotation.

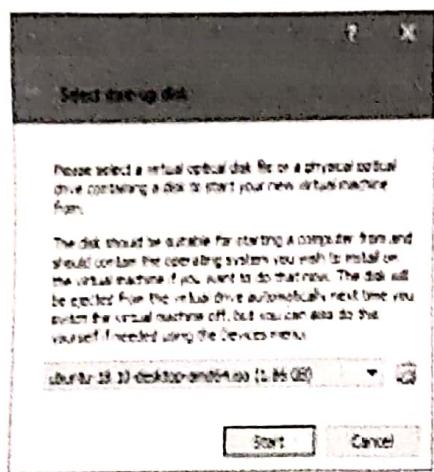

- i) Click the icon on the very right of the menu bar and select System Settings.
 - ii) Open Screen Display.
 - iii) If you have multiple displays and they are not mirrored, you can have different settings on each display. Select a display in the preview area.
 - iv) Select your desired resolution and rotation.
 - v) Click Apply. The new settings will be applied for 30 seconds before reverting back. That way, if you cannot see anything with the new.
- D) Time Settings Change the time zone of your system to (or New York Time)

→ If you are currently in Indian Time. How does the displayed time change?

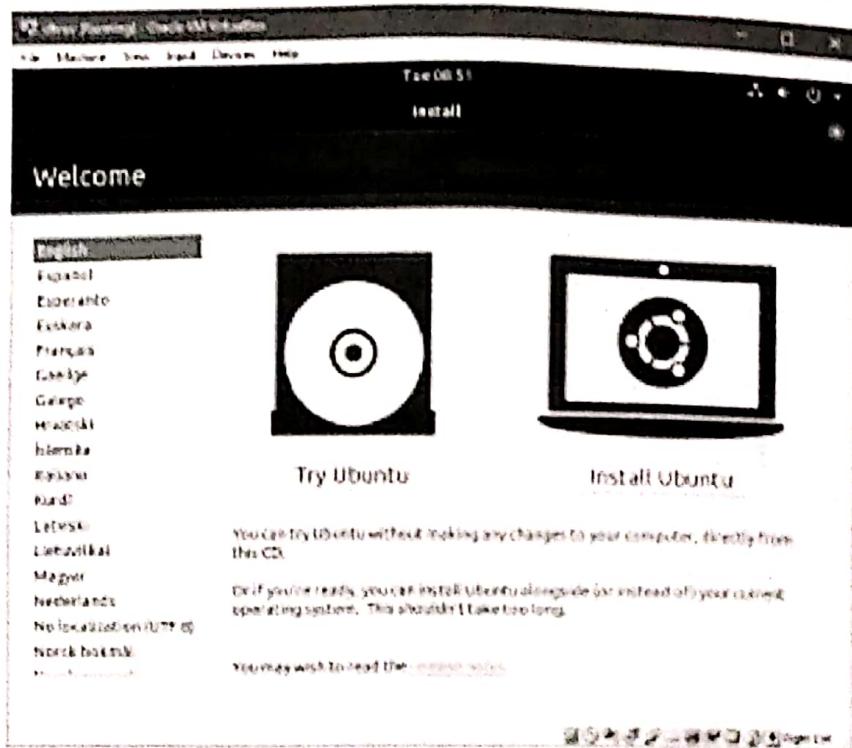

S - ANSWER

- After noting the time change, the time zone back to your local time zone.
- Just click on the clock on the top bar, and choose Time and Date Settings, once the Time and Date window opens, choose Manually, so you can change the time and date manually, otherwise choose your time zone from the map, and choose Automatic.

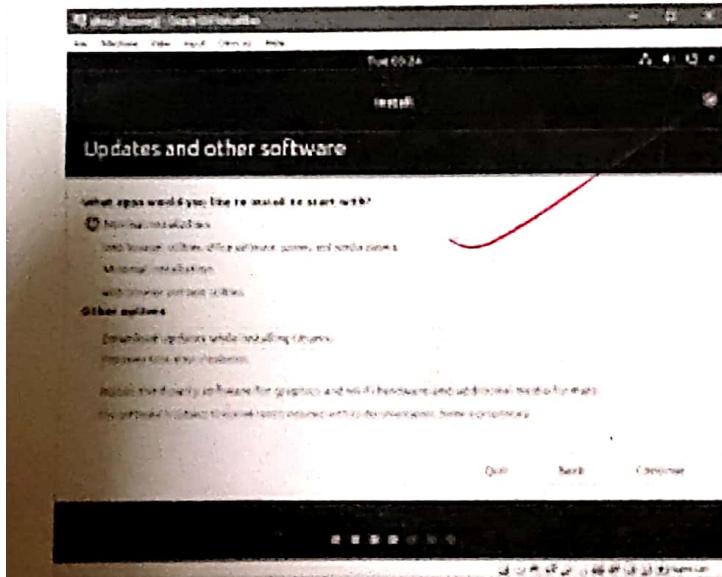

Step1

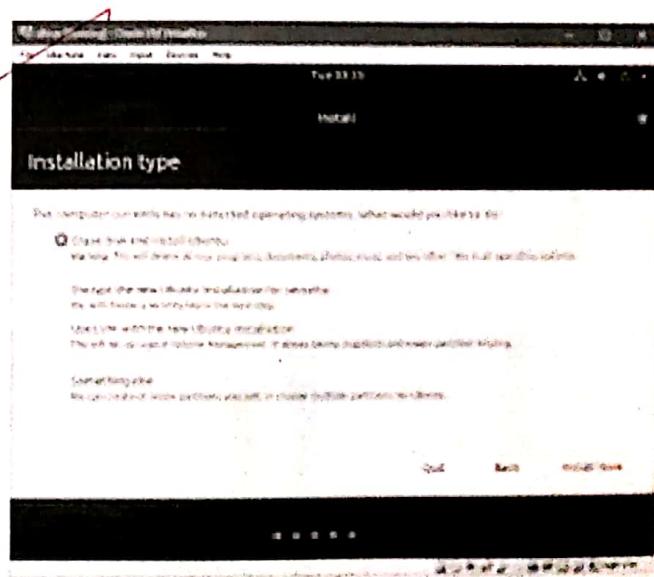

Step 2

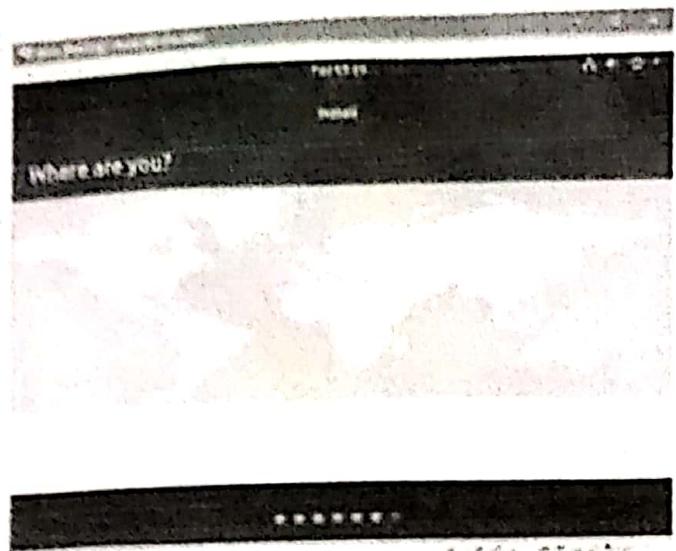

Step3

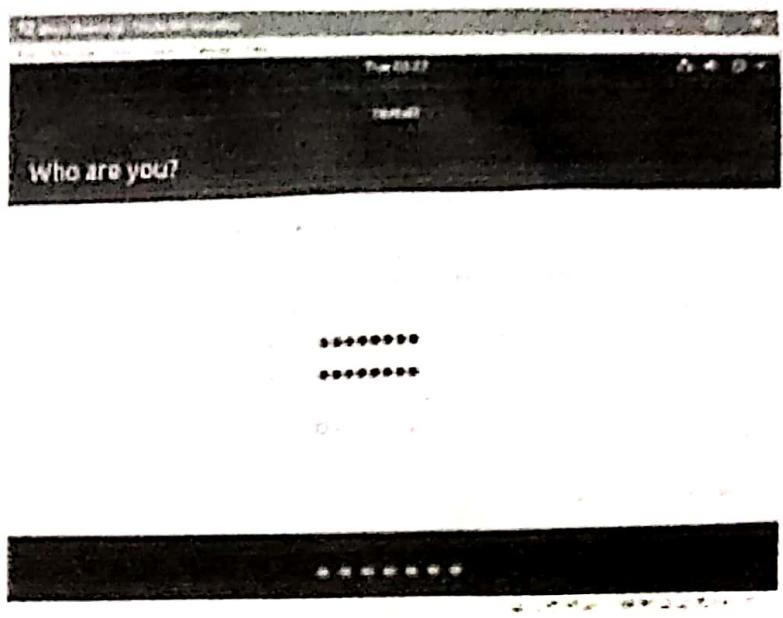

step 4

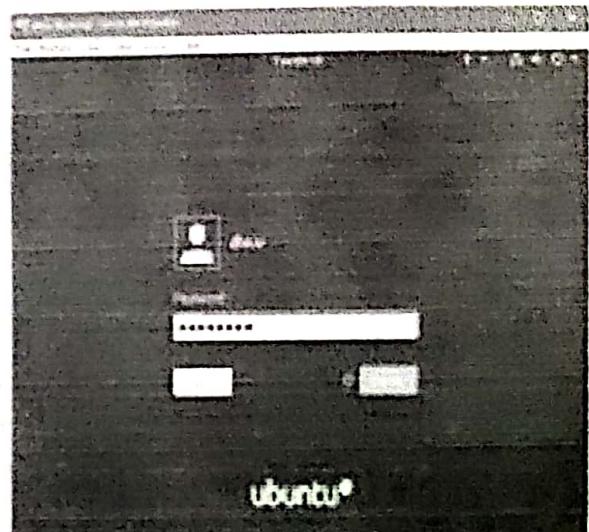

Step5

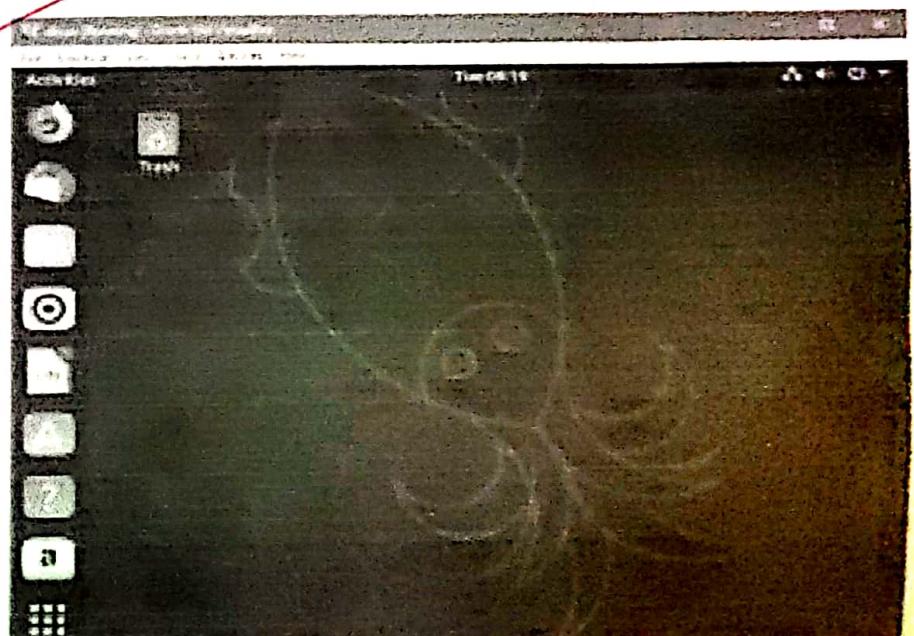

step6

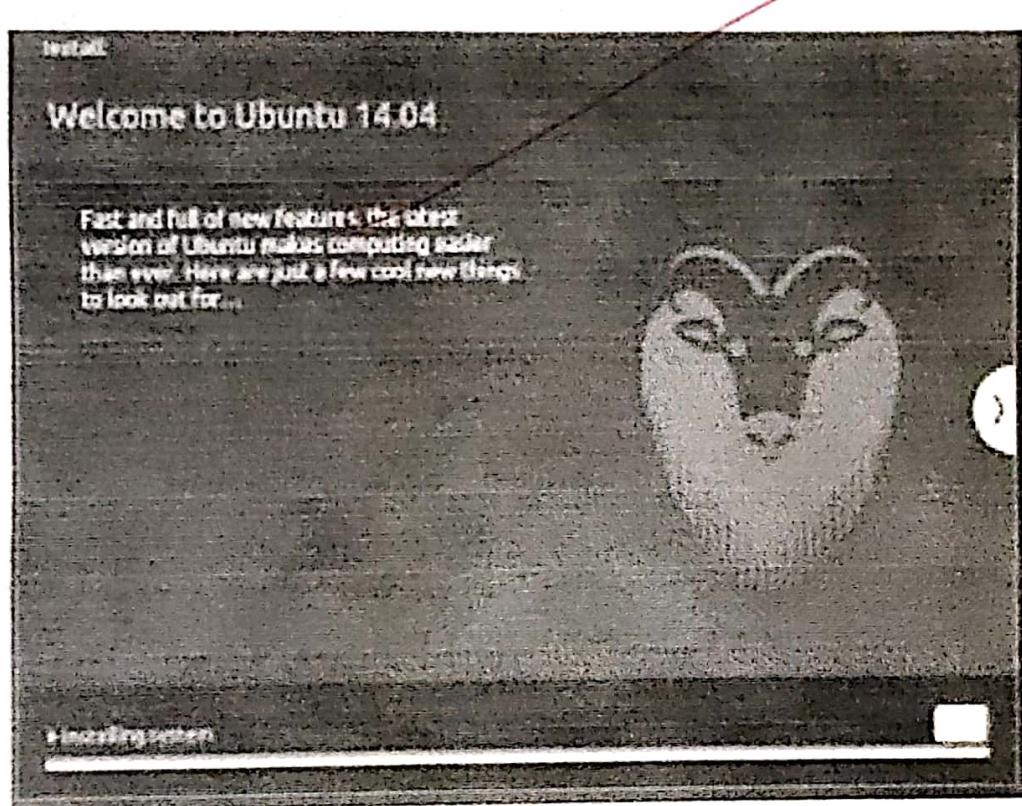

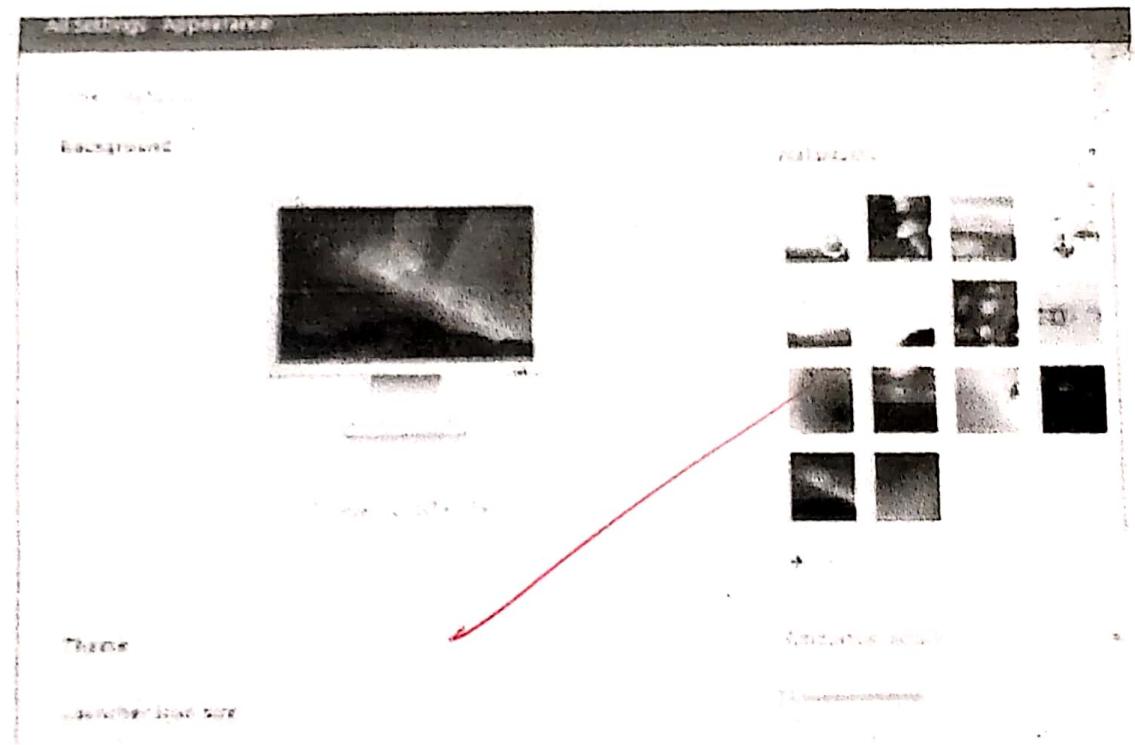

Step7

step8

88.

PRACTICAL - 2

AIM : Installing and Removing Software

Install gcc package, Verify that it runs and then remove it.

STEP 1 : First type 'gcc -v' to know if you have already installed gcc compiler or not. If the output is blank then it means that you don't have gcc installed.

STEP 2 : Type 'sudo apt-get install gcc'. After typing the following command distribution installation will take place.

STEP 3 : Type 'sudo apt-get install build-essential'. This will install all the libraries required for C and C++ programming language.

Now to uninstall gcc compiler.

In GCC 5.1.0, although there is no top level uninstall target, some directories do have it, in particular gcc, so you can do:

Type: `cd build/gcc/uninstall`
and then run make

This does not remove everything that was installed, but it removes major executables like gcc, g++, Cpp... contained in that directory.

~~It also removes all files in build/gcc/uninstall~~

~~but keeps (THE FILES) located in build/gcc/uninstall~~

PRACTICAL - 3

AIM : Utilization of grep, man command

DOCUMENTATION :

a) Finding info documentation : from the command line : bring up the info page for the grep command. Bring up the usage section.

→ To find info about any command in command is used. The syntax of info command is 'info (command name)'.

We are going to find the info about the 'grep' command :

Open the terminal (CTRL + ALT + T) and type: info grep.

After typing this command following output will be displayed onto your screen.

You can also scroll through pages using (space = up) and (backspace = down) keys.

Another, more summarized form of showing info is the 'man' command. The command is same 'info' but required data.

b) Finding man pages from the cmd line : Bring up the man page for the 'ls' command. Scroll down to the examples.

→ To use the 'man' command, simply type 'man (command name)'. Now we are going to find the manual for 'ls' command. simply type 'man ls'.

c) Finding man pages by topic 'what man pages are available in that document file compression'.

→ 'tar', 'zip' are some man pages which are available for document file compression simply type 'man zip' and 'man tar'.

d) Finding man pages by section from the cmd lines bring up the man page for the print f lib function which manual page section are library function found.

→ The number corresponds to what section of the manual page is from ls user command while 8 is sysadmin stuff. The man page for man itself explain it all the std out.

There are certain terms that have different pages in different sections (eg. 'print f' as a command appears in section 1 as a 'stdlib'

function appears in section 3); in cases like that you can pass the section no. to the man before the page name to choose which one you want or use man -etc show every matching page in a row.

You can tell what section a term falls in with 'man -k' (equivalent to apropos command). It will do substring matches too. So you need to use "term" to limit it.

e) Command-line help list the available options for the mkdir command. How can you do this?

→ \$mkdir -m a=rwx directoryname

PRACTICAL - 4

AIM : Command Line Operations.

i) Install new package on your system:

→ Sudo apt-get install [package name]

ii) Remove the package installed.

→ Sudo apt-get remove [package name]

iii) Find the password file in / using find command.

→ # find / -name password
 • /usr/share/doc/nss-/dap-253/pam.d/
 password.

• /user/bin/password

• /etc/pam.d/password

• /etc/password.

iv) Find the directory password file under root and one level down.

→ # find / -maxdepth 2 -name password.

• /etc/password.

v) Find the password file under root and 2 level down.

→ # find / -maxdepth 3 -name password
• /user/bin/password
• /etc/pam.d/password
• /etc/password

vi) Find the password file between sub-directories level 2 and 4.

→ # find -maxdepth 3 -maxdepth
-name password
• /user/bin/password
• /etc/pam.d/password

vii) Create a symbolic link to the file you found in last step.

→ # ln -s file1 file2

viii) Create an empty file example.txt and move it to /tmp directory using relative path.

→ # touch example.txt

mv example.txt /tmp

ix) Delete the file moved to /tmp in previous step by absolute method.

C. - IADITIASHI :

→ # rm /tmp /example.txt

find the location of ls, ps, bash commands.

→ # whereis ls

ls : /bin /ls /user /share /man /man1 /ls
· / · gz

whereis ps

ps : /bin /ps /user /share /maps : /bin /ps
/user /share /man /man1 /ps · / · gz

whereis bash

bash : /bin /bash /etc /bash.bashrc /
user /share /man /man1 /bash · / · gz.

Q6 Use patch command to patch a file. And analyze the patch using patch command again.

Q7 What is buffer overflow? Explain with an example.

Q8 Explain the concept of stack overflow.

Q9 Explain the concept of stack smashing.

Q10 Explain the concept of stack corruption.

Q11 Explain the concept of stack overflow attack.

Q12 Explain the concept of stack overflow exploit.

Q13 Explain the concept of stack overflow vulnerability.

Q14 Explain the concept of stack overflow mitigation.

Q15 Explain the concept of stack overflow detection.

Q16 Explain the concept of stack overflow prevention.

Q17 Explain the concept of stack overflow detection and prevention.

Q18 Explain the concept of stack overflow detection and prevention.

Q19 Explain the concept of stack overflow detection and prevention.

Q20 Explain the concept of stack overflow detection and prevention.

PRACTICAL - 6

AIM : Use Environment.

A) Which account you are logged in? How can you find out?

→ who command and whoami

B) Display /etc/shadow file using cat command and understand the importance of shadow file. How it's different than passwd file.

→ cat /etc/shadow

As with the passwd file, each field in the shadow file is also separated with ":" colon character, and are as follows :

= Username, up to 8 characters. Case-sensitive usually all lowercase. A direct match to the username in the /etc/passwd file.

= Password, 13 character encrypted. A blank entry (e.g. ::) indicates a password is not required to log in (usually a bad idea), and a "*" entry (e.g. :*:) indicates the account has been disabled.

= The number of days (since January 1, 1970) since the password was last changed.

A)

```
jeba@jeba-VirtualBox:~  
jeba@jeba-VirtualBox:~$ who  
jeba    tty7          2020-01-15 20:32 (:0)  
jeba@jeba-VirtualBox:~$ whoami  
jeba  
jeba@jeba-VirtualBox:~$ who -l  
jeba    tty1          2020-01-15 20:30  
jeba@jeba-VirtualBox:~$  
780 id:tty1
```

```
jeba@jeba-VirtualBox:~$ w  
20:35:04 up 4 min, 1 user, load average: 0.70, 0.79, 0.38  
USER   TTY      FROM             LOGIN@   IDLE   JCPU   PCPU WHAT  
jeba    tty7     :0               20:32   4:28   0:19s  0.33s /sbin/upstart  
jeba@jeba-VirtualBox:~$ w -s  
20:35:14 up 4 min, 1 user, load average: 0.68, 0.77, 0.37  
USER   TTY      FROM             LOGIN@   IDLE   JCPU   PCPU WHAT  
jeba    tty7     :0               20:32   4:38   0:19s /sbin/upstart --user  
jeba@jeba-VirtualBox:~$ w -h  
jeba    tty7     :0               20:32   4:44   0:07s  0.33s /sbin/upstart  
jeba@jeba-VirtualBox:~$ w -f  
20:35:12 up 5 min, 1 user, load average: 0.41, 0.60, 0.37  
USER   TTY      LOGIN@   IDLE   JCPU   PCPU WHAT  
jeba    tty7     20:32   5:36   0.00s  0.33s /sbin/upstart --user
```

= The number of days before password may be changed (0 indicates it may be changed at any time).

= The number of days after which password must be changed (9999 indicates user can keep his or her password unchanged for many, many years)

= The number of days to warn user of an expiring password (7 for a full week)

= The number of days after password expires that account is disabled

= The number of days since January 1, 1970 that an account has been disabled

= A reserved field for possible future use

Each field in a password entry is separated with ":" colon characters, and are as follows:

= Username, up to 8 characters. Case-sensitive, usually all lowercase.

= An "x" in the password field. Passwords are stored in the "/etc/shadow" file.

```
jebajeba@virtualBox:~$ sudo cat /etc/shadow
[sudo] password for jebajeba:
root:18240:0:99999:7:::
daemon:16911:0:99999:7:::
bin:16911:0:99999:7:::
sys:16911:0:99999:7:::
sync:16911:0:99999:7:::
games:16911:0:99999:7:::
man:16911:0:99999:7:::
lp:16911:0:99999:7:::
mail:16911:0:99999:7:::
news:16911:0:99999:7:::
```

- = Numeric user id. This is assigned by the "adduser" script. Unix uses the field, plus the following group field, to identify which files belong to the user.
- = Numeric group id. Red Hat uses group id's in a fairly unique manner for enhanced file security. Usually the group id will match the user id.
- = Full name of user. I'm not sure what the maximum length for this field is, but try to keep it reasonable (under 30 characters).
- = User's home directory. Usually /home/username (e.g. /home/smit). All user's personal files, web pages, mail forwarding, etc. will be stored here.
- = User's "shell account". Often set to "/bin/bash" to provide access to the bash shell (my personal favorite shell).

c) Get your current working directory.
→ pwd.

```
jeba@jeba-VirtualBox:~$ sudo cat /etc/passwd
root:x:0:0:root:/bin/bash
daemon:x:1:1:daemon:/usr/sbin/nologin
bin:x:2:2:bin:/bin:/usr/sbin/nologin
sys:x:3:3:sys:/dev:/usr/sbin/nologin
sync:x:4:65534:sync:/bin:/usr/sbin/nologin
games:x:5:69:games:/usr/games:/usr/sbin/nologin
man:x:6:12:man:/var/cache/man:/usr/sbin/nologin
lp:x:7:7:lp:/var/spool/lpd:/usr/sbin/nologin
mail:x:8:8:mail:/var/mail:/usr/sbin/nologin
news:x:9:9:news:/var/spool/news:/usr/sbin/nologin
uucp:x:10:10:uucp:/var/spool/uucp:/usr/sbin/nologin
proxy:x:13:13:proxy:/bin:/usr/sbin/nologin
www-data:x:33:33:www-data:/var/www:/usr/sbin/nologin
backup:x:34:34:backup:/var/backups:/usr/sbin/nologin
list:x:38:38:Mailing List Manager:/var/list:/usr/sbin/nologin
```

c)

```
jeba@jeba-VirtualBox:~$ pwd
/home/jeba
jeba@jeba-VirtualBox:~$
```

d) Explain different ways of getting command history, how to run previously executed command without typing it.

→ history
! line number.

e) Create alias to most commonly used command

→ Alias command instructs shell to replace one string with another string while executing the commands

alias label = "command"

```
jeba@jeba-VirtualBox:~$ history
jeba@jeba-VirtualBox:~$ history
1 who
2 man
3 who -l
4 clear
5 w
6 w -s
7 w -r
8 w -f
9 clear
10 cat /etc/shadow
11 sudo cat /etc/shadow
12 clear
13 sudo cat /etc/passwd
14 pwd
15 clear
16 history
who -l
jeba@jeba-VirtualBox:~$ !3
jeba@jeba-VirtualBox:~$
```

```
jeba@jeba-VirtualBox:~$ alias m="mkdir new"
jeba@jeba-VirtualBox:~$ m
jeba@jeba-VirtualBox:~$ ls
Desktop Downloads Music Pictures Templates
Documents examples.desktop new Public Videos
jeba@jeba-VirtualBox:~$
```

PRACTICAL - 7

AIM: Linux Editors : Vi or VIM , nano

Create, modify, search and navigate a file in editor.

i) Creating a file :

→ To create a file, on the terminal type followed by filename.

ii) Modifying the file:

→ To modify a file, on the vi editor, type 'o'.

iii) Search in a file :

→ To find a word (forward search) press followed by the word to search.

iv) Navigate :

→ i) Movement in four directions.

ii) Word Navigation.

iii) Scrolling.

Movement in four directions.

Key	Action
k	Moves cursor up
j	Moves cursor down
h	Moves cursor left
l	Moves cursor right

Word Navigation

Key	Action
b	Moves back to the beginning of the word
e	Moves forward to the end of the word
w	Moves forward to the beginning of the word
0(zero)	Move to first character of a line
s	Move to the end of line

Scrolling

Key	Action
Ctrl+f	Scrolls forward
Ctrl+b	Scrolls backward
Ctrl+d	Scrolls half page
Ctrl+u	Scrolls half page backward

Learn all essentials commands like search / replace, highlight, show line numbers.

i) Replace

→ : / g / word to be replaced / s / new word / gc.

ii) Highlight

→ Use set hlsearch

iii) Show the line number

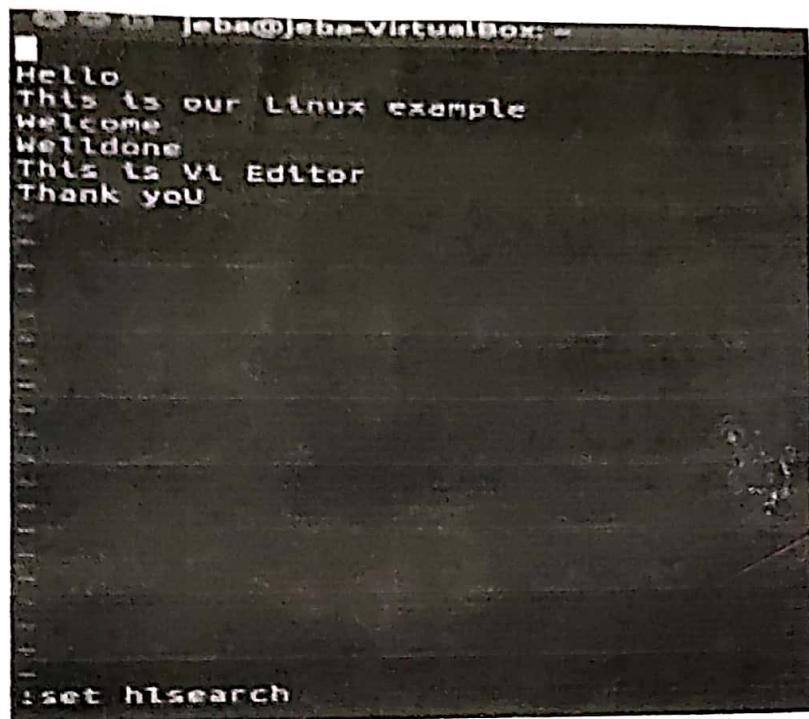

→ Use set nu.

```

PRACTICAL - 8

AIM : Linux Security

Use of sudo to change user privileges to root.

→ Create an user named user1

To give some user root privileges edit /etc/sudoers using visudo. Enter new line as highlighted below.

Identify operations that require sudo privileges.

```
jeba@jeba-VirtualBox:~$ sudo useradd user1
[sudo] password for jeba:
jeba@jeba-VirtualBox:~$ sudo passwd user1
Enter new UNIX password:
Retype new UNIX password:
passwd: password updated successfully
jeba@jeba-VirtualBox:~$
```

```
# Please consider adding local content in /etc/sudoers.d/ instead of
# directly modifying this file.
#
# See the man page for details on how to write a sudoers file.
#
Defaults      env_reset

c) Modify expiration date for new user using password ageing.

→ -E : Expiration Date

-m : Minimum number of days before password change.

-M : Number of days password is valid

-I : Account inactive

-W : Number of days of warning before a password change is required.

jeba@jeba-VirtualBox: ~

```
jeba@jeba-VirtualBox:~$ sudo chage -l user1
Last password change : Jan 20, 2020
Password expires : never
Password inactive : never
Account expires : never
Minimum number of days between password change : 0
Maximum number of days between password change : 99999
Number of days of warning before password expires : 7
```

```
jeba@jeba-VirtualBox:~$ sudo chage user1
Changing the aging information for user1
Enter the new value, or press ENTER for the default
```

```
    Minimum Password Age [0]: 100
    Maximum Password Age [99999]: 200
    Last Password Change (YYYY-MM-DD) [2020-01-20]: 2020-01-21
    Password Expiration Warning [7]: 5
    Password Inactive [-1]:
        Account Expiration Date (YYYY-MM-DD) [-1]: 2020-01-31
```

```
jeba@jeba-VirtualBox:~$ sudo chage -l user1
Last password change : Jan 21, 2020
Password expires : Aug 08, 2020
Password inactive : never
Account expires : Jan 31, 2020
Minimum number of days between password change : 100
Maximum number of days between password change : 200
Number of days of warning before password expires : 5
```

```
jeba@jeba-VirtualBox:~$ sudo chage -E 25/01/2020 -m 10 -M 90 -I 30 -W 30 user1
jeba@jeba-VirtualBox:~$ sudo chage -l user1
```

```
Last password change : Jan 21, 2020
Password expires : Apr 20, 2020
Password inactive : May 20, 2020
Account expires : Jan 01, 2022
Minimum number of days between password change : 10
Maximum number of days between password change : 90
Number of days of warning before password expires : 30
```

```
jeba@jeba-VirtualBox:~$ sudo userdel user1  
[sudo] password for jeba:  
jeba@jeba-VirtualBox:~$ su user1  
No passwd entry for user 'user1'  
jeba@jeba-VirtualBox:~$
```

D) Delete newly added user.

PRACTICAL-10

AIM : Shell Scripting

→ Basics of shell scripting :

- a) To get a shell, you need to start a terminal.
- b) To see what shell you have, run :
echo \$SHELL
- c) In Linux, the dollar sign (\$) stands for shell variable.
- d) The echo command just returns whatever you type in.
- e) #!/bin/bash - It is called shebang. It is written at the top of a shell script and it passes the instruction to the program /bin/bash

Echo \$SHELL

```
tcsc@tcsc-VirtualBox:~$ echo $SHELL  
/bin/bash  
tcsc@tcsc-VirtualBox:~$
```

- vi filename.sh
- ```
#!/bin/bash
echo "THIS IS LINUX!"
```

```
tcsc@tcsc-VirtualBox:~$
#!/bin/bash
echo "THIS IS LINUX!"

Linux.sh [New File]
```

- Chmod 777 filename.sh
- ./filename.sh

```
tcsc@tcsc-VirtualBox:~$ vi linux.sh
tcsc@tcsc-VirtualBox:~$ chmod 777 linux.sh
tcsc@tcsc-VirtualBox:~$./linux.sh
THIS IS LINUX!
tcsc@tcsc-VirtualBox:~$
```

Step to write and execute a shell script.

Shell script is just a simple text file with .sh extension, having executable permission.

a) Open terminal

b) Navigate to the place where you want to create script using cd command.

c) Touch filename.sh

d) Vi filename.sh [You can use your favourite editor, to edit the script]

e) chmod 777 filename.sh (for making the script executable)

f) sh filename.sh or ./filename.sh (for running the script)

## Program to display your name

```
#!/bin/bash
Echo "Enter your name:"
Read name
Echo "My name is:$name"
```

A screenshot of a terminal window titled 'tcsc@tcsc-VirtualBox: ~'. The window contains the following text:

```
#!/bin/bash
echo "Enter your name:"
read name
echo "My name is: $name"
```

The terminal window has a red arrow pointing from the top right towards the text.

A screenshot of a terminal window titled 'tcsc@tcsc-VirtualBox: ~'. The window contains the following text:

```
tcsc@tcsc-VirtualBox: ~$./ubuntu.sh
tcsc@tcsc-VirtualBox: ~$ chmod 777 ubuntu.sh
tcsc@tcsc-VirtualBox: ~$./ubuntu.sh
Enter your name:
```

The terminal window has a red arrow pointing from the top right towards the text.

→ Program to find the sum of two variables.

Program to find the sum of two variables  
vi filename.sh

```
#!/bin/bash
a=100
b=25
sum=$((a+b))
echo "sum is $sum"
```

```
tcsc@tcsc-VirtualBox: ~
#!/bin/bash
a=100
b=25
sum=$((a+b))
echo "sum is $sum"

sum is 125
```

```
tcsc@tcsc-VirtualBox: ~
vi linux2.sh
chmod 777 linux2.sh
./linux2.sh
Sum is 125
```

→ Program to find the sum of two numbers  
(values passed during execution)

```
tcsc@tcsc-VirtualBox:~$ cd Desktop/VirtualBox
tcsc@tcsc-VirtualBox:~$ vi lin.sh
tcsc@tcsc-VirtualBox:~$ chmod 777 lin.sh
lin.sh: 3 lines, 46 characters
```

```
tcsc@tcsc-VirtualBox:~$ vi lin.sh
tcsc@tcsc-VirtualBox:~$ chmod 777 lin.sh
sum ls:120
sum ls:120
tcsc@tcsc-VirtualBox:~$
```

### → Sed

Sed command or Stream Editor is very powerful utility offered by Linux systems. It is mainly used for text substitution, find and replace but it can perform other text manipulations like insertion, deletion, search, etc. With sed, we can edit complete files without actually having to open it.

Consider the following text file -

#### 1) Displaying partial text of a file

⇒ With sed, we can view only part of a file rather than seeing whole file.

2) Display all except some lines

⇒ To display all content of a file except for some portion, use option 'd'.

3) Deleting a line

⇒ To delete a line, use line number followed by 'd'.

4) Search and Replacing a string

⇒ 's' option is for searching a word.

5) Replace a string on a particular line

⇒ To replace a string on a particular line, use line number with 's' option.

6) Add a line after / before the matched string

⇒ To add a new line with some content after every pattern match, use option 'a'.

⇒ To add a new line with some content before every pattern match, use option 'T'.
